### Boom elevation

One double acting hydraulic cylinder with integral holding valve provides elevation from -3° to 78°.

### Load moment and anti-two block system

“Graphic Display” load moment and anti-two block system with audio-visual warning and control lever layout. These systems provide electronic display of boom angle, length, radius, tip height, relative load moment, maximum permissible load, load indication and warning of impending two-block condition. The standard Work Area Definition System allows the operator to pre-select and define safe working areas. If the crane approaches the pre-set limits, audio-visual warnings aid the operator in avoiding job-site obstructions.

### Crane control system

Full electronic control of all crane movements, using electronic dual axis control levers. Controls are integrated with the LMI by CanBus.

### Cab

20° tilt, Full-vision, all-steel fabricated with acoustical lining and tinted safety glass throughout. Deluxe seat incorporates armrest-mounted electric dual-axis controllers. Tilt/telescoping steering wheel with various controls incorporated into the steering column. Other standard features include: hot water heater, cab circulating air fan, sliding side and rear windows, sliding skylight with electric wiper and sunscreen, electric windshield wash/wipe, fire extinguisher, seat belt, air conditioning, and dual cab mounted work light.

### Swing

Two planetary swing drive with axial piston motors provide infinitely variable rotation speeds. Foot applied multi-disc wet brake with Spring applied, hydraulically released stationary swing brake. Two position mechanical house lock, operated from cab.  
Maximum speed: 1.5 rpm.

### Counterweight

**Notes for fixed and intermediate lengths when lifting on rubber:**

1. Capacities do not exceed 75% of tipping loads as determined by test in accordance with SAE J765.
2. Capacities are applicable to machines equipped with General 33.25x29 (38 ply) tires at 85 psi cold inflation pressure.
3. Capacities are applicable only with machine on firm level surface.
5. On rubber lifting with boom extension is not permitted.
6. All lifting depends on proper tire inflation, capacity and condition. Capacities must be reduced for lower tire inflation pressures. Damaged tires are hazardous to safe operation of crane.
7. For pick and carry operation, boom must be centered over front of machine, mechanical swing lock engaged and load restrained from swinging.

#### Notes for fixed and intermediate lengths when lifting on rubber:

- Capacities are applicable to machines equipped with General 33.25x29 (38 ply) tires at 85 psi cold inflation pressure. Capacities do not exceed 75% of tipping loads as determined by test in accordance with SAE J765.
- With no load, do not exceed a 30 ft load radius over sides of machine since a loss of stability could occur causing a tipping condition. To lower boom into a horizontal position, swing the boom directly over the front of the machine and either fully retract the boom or switch the SLI system into a rigging table.
- Once one outrigger box is installed, do not swing over that end of the machine while installing the other outrigger box.
- Capacities are applicable only with machine on firm level surface.
- On rubber lifting with boom extension is not permitted.
- Axle lockouts must be functioning when lifting on rubber over the sides.
- All lifting depends on proper tire inflation, capacity and condition. Capacities must be reduced for lower tire inflation pressures. Damaged tires are hazardous to safe operation of crane.

THIS CHART IS ONLY A GUIDE AND SHOULD NOT BE USED TO OPERATE THE CRANE.

The individual crane's load chart, operating instructions and other instructional plates must be read and understood prior to operating the crane
